

LIVE DEMONSTRATION OF CANON MIXED REALITY SYSTEM

**November 4, 2014
243 Technology building
10:30am to 12:30pm**

The Canon Mixed Reality (MR) System is a breakthrough in image science that seamlessly combines the virtual world of computer-generated imagery (CGI) with the real-world environment. The MR experience offers more realism than conventional Virtual Reality, allowing you to actually see, experience, and interact with your designs in real time, from virtually any point of view, and with a life-like sense of scale. Opportunities for developing education and research applications will be explored.
