

# COMPUTER VISION RESEARCH PROGRAM

A computer vision(CV) algorithm analyzes the left side image and produces the right side image while automatically counting tumor spheres and quantifying their sizes, which are important features for cancer research.

You will learn the fundamentals of CV, artificial intelligence, and Python during a month-long CV program, and then you will do research on a CV project.

## NSF FUNDED

CV Research Program Dates:  
May 15 - June 15 , 2023  
3 hours / weekday

COSET juniors and seniors can send  
their resumes to  
[ismet.sahin@tsu.edu](mailto:ismet.sahin@tsu.edu)

This activity is supported by an NSF  
(National Science Foundation) grant.  
We will meet at the Texas Southern  
University campus for this program.

## \$2000 STIPEND
